Git

Git is a software for tracking changes in any set of files, usually used for coordinating work among programmers collaboratively developing source code during software development. Its goals include speed, data integrity, and support for distributed, non-linear workflows (thousands of parallel branches running on different systems).

Presentation

Making a good presentation starts with crafting the content. No matter how compelling your message is, if you don't get it out of your brain and on to the screen in a simple way, you'll be met with a sea of blank faces. So, where to begin?

2 title: Post (9-15 May)
3 subtitle: Monday was the anniversary of the Great Victory. From 8 to 12 May I was in St. Petersburg. The weather was
   good. I had a great time with friends and acquaintances. We visited several parks, cafes, art space, museum. Now I
   have two tattoos on my body. In general, the holiday was a success! On Friday morning I returned to Moscow. I
   visited a couple in German and started doing laboratory work.

40
41 ## 1. Create an easy-to-follow structure
42
43 When it comes to what you have to say, break it down into three simple sections: your presentation needs an
   introduction, body, and conclusion.
44
45 - A compelling introduction. Your introduction needs to briefly sum up what you're going to talk about and why it's
   useful or relevant to your audience.
46 - Offer a body of evidence. The body of your presentation is where you hit 'em with the facts, quotes, and evidence
   to back up your main points.
47 - Sum up with key takeaways. The conclusion is where you loop back to your original statement and give the audience
   some key takeaways on how they can put into practice what they've learned.
48 - No more than 10 slides in total. Who wants to sit through pages and pages of slides? No one, that's who. By
   keeping your slide deck to 10 slides, even if your presentation is 30 minutes long, you'll give the audience a
   chance to digest the on-screen messages in line with your talk. Using concept maps before structuring your slides
   can help keep to the point.
49
50
51 <!-- {{< figure src="https://raw.githubusercontent.com/wowchemy/wowchemy-hugo-modules/master/academic.png"
   title="The template is mobile first with a responsive design to ensure that your site looks stunning on every
   device." >}}-->
52
53 ## 2. Limit the amount of copy on each slide
54
55 Less really is more, especially when it comes to making a good presentation. Too much text and the audience will
   just be reading the screen instead of looking at you and feeling the emotional impact of your message.
56
57 - No more than six words per slide. Marketing king Seth Godin says we should have just six words per slide - that's
   not a lot of copy. Choose your words carefully and rewrite until you've got it just right.
58 - Think 'bite-size' information. We called ourselves Biteable a reason: studies have shown that information is
   retained better when it's broken down into bite-sized chunks. Video is a great way to learn and research suggests
   it's 95% more compelling than text.
